

QCM = Quick Coupling Male

QCF = Quick Coupling Female

General

The High Pressure Quick Coupling is a coupling for connecting airbottles of a diver below waterlevel. The diver can refill his bottles under water.

On the couplings high pressures of up to 300 bar are possible without arising airbubbles when connecting / or disconnecting the couplings.

Because of the special design its impossible water enters the air system of the diver.

Advantages

- Fast and Easy Coupling
- High Pressure
- Not Leaking
- Refilling airbottles under water
- No airbubbles released when connecting/ disconnecting the couplings.

Specifications

Description

Material	CuAl 10Ni and RVS 316
Pressure	Up to 300 bar

Ordering info

Description

Partnumber

Quick Coupling Male	3.50.001
Quick Coupling Female	3.50.002
Dust cover Quick Coupling Male	3.80.111-1
Dust cover Quick Coupling Female	3.80.111-2
