

The Hytech Life support hat is a device for respiratory protection in hostile environments. The inside of the hat is completely sealed off from the environment. The hat has a dual breathing air regulator system, that creates an overpressure inside the hat. The overpressure will make sure that no dangerous gas from the environment can enter the hat in case of a small leak.

The hat is sealed to the user's neck with a neck ring. This neck ring is put around the neck first, and then the hat is clamped to the neck ring.

Features

- Lightweight
- Comfortable to wear
- Built-in communication microphone and speakers
- Only minimal maintenance required
- Regulators can be switched from demand to freeflow mode
- Very easy to exchange basic components such as the regulators, the head cushion etc.
- Dual demand regulators
- Regulators and outlet valve protected by a heavy-duty cover
- Materials:
 - Shell: fiberglass
 - Viewport retainer: carbon fiber
 - Neck seal: neoprene rubber
