

VideoRays are the smallest, lightest and easiest to deploy micro-ROVs (*Remote Operated Vehicle*).

They will shoot underwater footage in the highest possible video quality, at the most affordable price.

'State of the art' materials, electronics, optics en hydrodynamics make VideoRay an advanced ROV that can be easily controlled from land, pier or ship.

The VideoRay is very easy to operate

The complete VideoRay-system weighs between 32kg (*VideoRay Scout*) and 75kg (*VideoRay Deep Blue*) and will fit into 2 or 3 pelican cases.

This means the system is compact and easy to transport. The standard set consists of ROV, lights, video camera, umbilical, remote control unit, colour monitor, documentation and maintenance kit.

Four different models are available to fulfil all your demands. Every model can be equipped with various options, such as sonar, manipulator etc.

-VideoRay Scout : from € 5.995,-

-VideoRay Explorer:

-VideoRay Pro III :

-VideoRay Deep Blue: up to € 49.900,-

VideoRays are used worldwide for various applications, like:

- Army
- Customs
- Forensic investigations
- Search & Rescue
- Inshore
- Offshore
- Science & Research
- Safety
- Wreck inspection
- Aquaculture
- Etc.
